CONTENT ANALYSIS

At ALLIED, we take great pride in being able to trace every single cluster of down back to the origin for all of our partner. We have even opened small offices in rural parts of the world to ensure that impossible-complicated supply chains that were previously considered untraceable are exactly that...traceable. And by building out the industry's most robust internal automated traceability database, we have now been able to build a new experience around down products for the consumer via TRACKMYDOWN.COM.

While the sourcing standards such as the RDS are important for the industry, they still do not engage directly with the consumer. We have build TRACKMYDOWN to be a tool that allows the consumer a direct connection to an extremely complicated insulation. Every lot of down receives a unique lot number that accompanies every shipment. By incorporating additional unique customer numbers into the processed lot numbers, we are able to build an automated, scalable, and customizable lot page where consumers will experience the material in ways that represent exactly each of our partners' brand and communication needs.
